

# LOCOX - Adaptation of locomotor activity in patients suffering from hip osteoarthritis

Head :Bonithon-Kopp Claire, CHU DIJON / INSERM CIE 1 UNIVERSITÉ DE BOURGOGNE  
Maillefert , CHU DIJON

Last update : 07/30/2014 | Version : 1 | ID : 60148

## General

### Identification

Detailed name                      Adaptation of locomotor activity in patients suffering from hip osteoarthritis

Sign or acronym                      LOCOX

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation                      CNIL : 28/04/2008

### General Aspects

Medical area                      Rheumatology

Others (details)                      Hip osteoarthritis

Keywords                      total hip replacement, Health episodes, indication

### Scientific investigator(s) (Contact)

Name of the director                      Bonithon-Kopp

Surname                      Claire

Address                      21000 DIJON

Email                      bonithon@u-bourgogne.fr

Unit                      CHU DIJON / INSERM CIE 1 UNIVERSITÉ DE BOURGOGNE

Organization                      CHU

Name of the director                      Maillefert

Address                      21000 DIJON

| Database objective                                                     |                                                                                                                                                                                                                                                                                                        |
| Main objective                                                         | General objective: to assess the prognostic value of a characteristic evaluation of gait in persons suffering from hip osteoarthritis for subsequent indications for total hip replacement. Analysis of the adaptation of locomotor activity as a prognostic criterion for future disease progression. |
| Inclusion criteria                                                     | Men and women aged between 45 and 75 years - suffering from primary hip osteoarthritis defined according to ACR criteria; - presented pain in the hip for at least one month in the preceding 3                                                                                                        |

months; - radiological stage II, III or IV hip osteoarthritis according to the Kellgren and Lawrence classification; - able to understand simple instructions, packaging instructions and give their informed consent. Exclusion criteria - indication of total hip replacement at the time of inclusion; - pregnant or breast-feeding women; - Alzheimer's disease; - chronic respiratory insufficiency with clinical manifestations; - Parkinson's disease; - motor neuron disease; - major musculo-skeletal disorder (other than hip osteoarthritis); - severe non-stabilised diabetes; - non-stabilised hypertension; - hip osteoarthritis inflammation flare; - rapidly destructive hip osteoarthritis; - radiography to evaluate structural evolution of the disease done more than six months previously; - Presence of osteoarthritis in another joint, or another osteoarticular or periarticular disease of the lower limbs with, in the opinion of the patient, disability due to this other disease that is greater than the disability caused by the hip osteoarthritis; - Spinal disease causing gait disturbance (radiculalgia, lumbar canal stenosis,? with, in the opinion of the patient, disability due to this other disease that is greater than the disability caused by the hip osteoarthritis.).

## Size of the database

Size of the database (number of individuals) < 500 individuals

Details of the number of individuals 35 patients

## Data

Database activity Current data collection

Type of data collected  
Clinical data  
Declarative data  
Paraclinical data

Clinical data (detail)  
Direct physical measures  
Medical registration

Declarative data (detail)  
Paper self-questionnaire

Paraclinical data (detail)  
Measurement of locomotor activity on specific platform

Presence of a biobank No

Health parameters studied Health event/morbidity

## Procedures

Data collection method  
Self-administered questionnaire: from paper questionnaire (manual input) and double data entry  
Interview: from paper questionnaire (manual input) with double data entry  
Clinical Examinations: handwritten (manual input) with double data entry

Participant monitoring Yes

Details on monitoring of participants  
Follow-up duration: 5 years

Links to administrative sources No

## Promotion and access

### Promotion

### Access

Terms of data access (charter for data provision, format of data, availability delay)  
To be decided if data may be used by academic teams  
To be decided if data may be used by industrial teams

Access to aggregated data

Access on specific project only

Access to individual data

Access on specific project only
