Main features

Type of database

Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	<p>00 randomly selected establishments. The interventions reached the number of 13500 including the extensions. The survey method is a one-stage stratified sampling : all the establishments performing more than 1000 IVG a year, 40% of the establishments performing between 250 and 1000 IVG a year, 20% of the establishments performing less than 250 IVG a year.</p> <p>All the doctors performing IVG into an establishment of the sample and all the doctors having a convention with one of the establishments included in the survey.</p> <p>Eight regions and a department have wished to extend the survey field, in order to have a regional representativeness of their results. In these areas, the field of the survey will be extended to 8 full weeks for all the IVG, sometimes increasing the number of the randomly selected establishments.</p>

Database objective

Main objective	Describe the access and caring conditions at the interruption of pregnancy. Describe the care system and the social and demographic characteristics, especially concerning minors and medical interruption of pregnancy performed in clinic. Precise the financial caring procedures of the IVG, pregnancy history and the utilization of contraception for women having an IVG.
Inclusion criteria	IVG performed in the establishments surveyed

Population type

Age
Adolescence (13 to 18 years)
Adulthood (19 to 24 years)
Adulthood (25 to 44 years)

Population covered
General population

Gender
Woman

Geography area
National

Detail of the geography area
Metropolitan France. Data can be exploited at the local level only inside regions having been a part of an extension of the survey : Guadeloupe, Réunion, Corse, Centre, Provence-Alpes-Côte d'Azur, Nord-Pas de Calais, Alsace, Midi-Pyrénées, and the Rhône department

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)
2007

Size of the database

Size of the database (number of individuals)
[10 000-20 000[individuals

Details of the number of individuals
About 1300 IVG surveyed (for 200 000 annual IVG, according to the SAE, annual establishment statistics)

Data

Database activity
Data collection completed

Type of data collected
Clinical data
Declarative data

Clinical data (detail)
Direct physical measures

Declarative data (detail)
Paper self-questionnaire

Presence of a biobank
No

Health parameters studied
Health event/morbidity
Health care consumption and services
Others

Care consumption (detail)	Hospitalization Medical/paramedical consultation Medicines consumption
Other (detail)	Social health inequalities

Procedures

Data collection method	Auto questionnaire and questionnaire filled by the doctor from the medical record.
Participant monitoring	No
Links to administrative sources	No
