Organisation status	Private
Sponsor(s) or organisation(s) responsible	INSERM U1027
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases

Study databases (details)	Repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A population file
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	In each participating country, institutions were randomly selected, then from among these institutions, classes were selected (Random two-stage cluster sample (institutions then class)). In addition in France, stratification was applied according to the following criteria: -INSEE commune type from four commune categories (rural, isolated town, suburbs, center of a built-up area), - public/private status
Database objective	
Main objective	The objectives of this survey are to follow the changes in certain behaviors, but also to build promotion strategies for health and to influence health policies in favor of young people. The international and multidisciplinary dimension of the survey is an undisputed wealth of information for understanding the behaviors and lifestyles of young Frenchmen. The HBSC survey follows a research protocol that is common to all of the countries, in order to standardize the sampling and data collection methods as much as possible.
Inclusion criteria	For the French portion: students ages 11 to 15 years schooled in metropolitan France from CM2 level to the first year of high school (general, technological and professional), in public institutions and private ones under contract.
Population type	
Age	Childhood (6 to 13 years) Adolescence (13 to 18 years)
Population covered	General population
Gender	Male

Woman

Geography area	International
Detail of the geography area	41 countries or regions in Europe are represented in this survey in 2010: Albania, Germany, England, Austria, Belgium (Flemish and French speaking), Bulgaria, Canada, Croatia, Denmark, Scotland, Spain, Estonia, United States of America, former Yugoslav Republic of Macedonia, Russian Federation, Finland, France, Greece, Greenland, Hungary, Ireland, Iceland, Israel, Italy, Latvia, Lithuania, Luxembourg, Malta, Norway, the Netherlands, Wales, Poland, Portugal, Czech Republic, Romania, Slovenia, Sweden, Switzerland, Turkey and Ukraine. In France, data is collected on a national scale.
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	1994
Size of the database	
Size of the database (number of individuals)	[10 000-20 000[individuals
Details of the number of individuals	2006: 7 154 élèves 2010 : 11 648
Data	
Database activity	Data collection completed
Type of data collected	Declarative data
Declarative data (detail)	Paper self-questionnaire
Presence of a biobank	No
Health parameters studied	Health event/morbidity Quality of life/health perception
Procedures	
Data collection method	The HBSC survey is based on an anonymous self-questionnaire filled out in class under the responsibility of a survey taker, nurse or school doctor most often.
Participant monitoring	No
