Main features

Type of database

Type of database	Study databases
------------------	-----------------

Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
---------------------------	--

Database recruitment is carried out by an intermediary	A selection of health institutions and services
--	---

Database recruitment is carried out as part of an interventional study	No
--	----

Additional information regarding sample selection.	612 dermatologists, 510 ENT specialists, 372 pulmonologists and 325 allergists participated in the study at patient enrolment.
--	--

Database objective

Main objective	To measure the level of anxiety in patients with an allergic disease.
----------------	---

Inclusion criteria	- male and female - adult - consulting various specialists for an allergic disease
--------------------	--

Population type

Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)
Population covered	Sick population
Gender	Male Woman
Geography area	National
Detail of the geography area	France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	02/2003
Size of the database	
Size of the database (number of individuals)	[1000-10 000[individuals
Details of the number of individuals	3916
Data	
Database activity	Data collection completed
Type of data collected	Declarative data
Declarative data (detail)	Paper self-questionnaire
Details of collected declarative data	- Questionnaire on characteristics, family and allergic history - Questionnaire on STAI (State-Trait Anxiety Inventory) anxiety scale - Questionnaire completed by the doctor that diagnosed the allergic disease
Presence of a biobank	No
Health parameters studied	Health event/morbidity Quality of life/health perception
Procedures	
Participant monitoring	No
Links to administrative sources	No
