

- Cross-sectional Study on Patients With Different Epileptic Seizure Susceptibility: Connection with Video Games

Head :Naquet Robert, -

Last update : 05/11/2015 | Version : 2 | ID : 9364

General	
Identification	
Detailed name	Cross-sectional Study on Patients With Different Epileptic Seizure Susceptibility: Connection with Video Games
General Aspects	
Medical area	Neurology
Health determinants	Lifestyle and behavior
Keywords	seizure, video games, television screen, photosensitivity, exposure
Scientific investigator(s) (Contact)	
Name of the director	Naquet
Surname	Robert
Address	Institut Alfred Fessard, CNRS, 91190 Gif-sur-Yvette
Phone	+ 33 (0)1 69 07 05 38
Email	robert.naquet@iaf.cnrs-gif.fr
Unit	-
Organization	CNRS - Centre National de la Recherche
Collaborations	
Funding	
Funding status	Public
Details	- French Ministry of Economy, Directorate-General for Competition, Consumer Affairs and Prevention of Fraud - French Foundation for Epilepsy Research.
Governance of the database	

Sponsor(s) or organisation(s) responsible	CNRS - Centre National de la Recherche Scientifique
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Research teams split subjects into three groups after selection from five French centres:1- A group of 33 patients that previously experienced one or more epileptic seizures only when exposed to a screen (television, video games or other); 2- a group of 42 epileptic photosensitive patients that also experienced seizures that are not triggered by photic stimuli; 3- a final group of 40 non-photosensitive epileptic patients.
Database objective	
Main objective	To show the effects of video game exposure on individuals that are susceptible to epileptic seizures.
Inclusion criteria	- Male and female; - between 7 and 30 years old; - Patients with different epileptic seizure susceptibility.
Population type	
Age	Childhood (6 to 13 years) Adolescence (13 to 18 years) Adulthood (19 to 24 years) Adulthood (25 to 44 years)
Population covered	Sick population

Gender	Male Woman
Geography area	National
Detail of the geography area	France (five centres throughout France: Debrousse Hospital in Lyon, Saint-Paul Centre in Marseilles, Strasbourg Regional University Hospital Centre, Bicêtre Hospital in Le Kremlin-Bicêtre and Charles-Nicolle Hospital in Rouen).
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	1995
Size of the database	
Size of the database (number of individuals)	< 500 individuals
Details of the number of individuals	115
Data	
Database activity	Data collection completed
Type of data collected	Clinical data
Clinical data (detail)	Direct physical measures
Presence of a biobank	No
Health parameters studied	Health event/morbidity
Procedures	
Data collection method	Subjects were successively placed in front of a television screen at 2 m, 1 m and 0.5 m. The same 10-minute video tape, consisting of snippets from television programmes, video games and a blank screen, was used in the five centres. Tests also included playing commercial video games on a television screen for 10 minutes, then hand-held video games for another 10 minutes.
Participant monitoring	No
Links to administrative sources	No
