Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A population file
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Definition of institutions to be included in the study according to a sampling taking into account the type (penitentiary, detention centre, prison) and the size of the institutions, specifying the number of interviews to be conducted per institution. 23 prison institutions 1,000 prisoners in metropolitan France and Martinique: 100 prisoners in 2 penitentiaries, 250 prisoners in 5 detention centres and 450 in 13 prisons), 100 female prisoners (2 institutions) and 100 male prisoners in an institution in an overseas department

(Martinique).

Database objective

Main objective	To calculate the prevalence of psychiatric disorders in the prison environment
----------------	--

Inclusion criteria	Prisoners (male and female) in institutions selected randomly in the protocol
--------------------	---

Population type

Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)
-----	--

Population covered	General population
--------------------	--------------------

Pathology

Gender	Male Woman
--------	---------------

Geography area	National
----------------	----------

Detail of the geography area	France
------------------------------	--------

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)	07/2003
--	---------

Date of last collection (YYYY or MM/YYYY)	09/2004
---	---------

Size of the database

Size of the database (number of individuals)	[1000-10 000[individuals
--	---------------------------

Details of the number of individuals	1000
--------------------------------------	------

Data

Database activity	Data collection completed
-------------------	---------------------------

Type of data collected	Clinical data Declarative data
------------------------	-----------------------------------

Clinical data (detail)	Medical registration
Details of collected clinical data	Diagnosis, the Mini International Neuropsychiatric Interview (MINI), A personality assessment using the proxy assessment version of the TCI, the WAIS test, the severity of problems using the CGI scale
Declarative data (detail)	Face to face interview
Details of collected declarative data	sociodemographic, personal, family and legal data
Presence of a biobank	No
Health parameters studied	Health event/morbidity
Procedures	
Data collection method	Two clinicians (a psychiatrist and a clinical psychologist) will meet together with the person being questioned. The psychologist conducts a structured interview in accordance with the directions for the Mini International Neuropsychiatric Interview (MINI). The psychiatrist will carry out a free interview with the prisoner (personal, family and legal data before incarceration). The clinicians then each independently provide one (or more) diagnosis/diagnoses (from the MINI and clinical information); as a second step, they arrange and propose one (or more) diagnosis/diagnoses that they agree upon. They also evaluate, separately and then together, the severity of the person's state (CGI severity scale) and their history.
Participant monitoring	No
Followed pathology	
Links to administrative sources	Yes
Linked administrative sources (detail)	Prison registration number
Promotion and access	
Promotion
