

- Cross-sectional study of pregnant women or women who have recently given birth, on exposure, knowledge and perception of the risks of tobacco

Head :Dumas Agnès, Centre for Epidemiological and Population Health Research (CESP)

Last update : 10/20/2017 | Version : 1 | ID : 73230

General	
Identification	
Detailed name	Cross-sectional study of pregnant women or women who have recently given birth, on exposure, knowledge and perception of the risks of tobacco
CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation	CNIL n° 305 971
General Aspects	
Medical area	Gynecology/ obstetrics Pneumology
Health determinants	Addictions Intoxication Lifestyle and behavior Pollution
Keywords	Breastfeeding, Perception of the risks, Risk behaviours, Smoking, Pregnancy
Scientific investigator(s) (Contact)	
Name of the director	Dumas
Surname	Agnès
Email	agnes.dumas@gustaveroussy.fr
Unit	Centre for Epidemiological and Population Health Research (CESP)
Organization	Inserm
Collaborations	
Funding	

Funding status	Public
Details	Direction générale de la santé.
Governance of the database	
Sponsor(s) or organisation(s) responsible	Inserm (CESP)
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A population file
Database recruitment is made on the basis of:	Another treatment or procedure
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	The contact details of the women were transmitted by the company Family Service, which collects them in exchange for promotional offers and gift boxes. For each sub-sample, telephone numbers were composed of land lines (two-thirds of the numbers) and mobile phone lines (one-third). The sample was stratified over the region of residence to represent the entire metropolitan area and the situation with regard to pregnancy so as to be composed equally of women in the 2nd trimester, the 3rd trimester and women having just given birth
Database objective	
Main objective	The objective of this study was to measure prenatal and postnatal tobacco exposure, assess women's perceptions and knowledge and identify risk factors.
Inclusion criteria	Pregnant women or women who have recently

given birth from the Family Service file
Women volunteering to participate in the study

Population type

Age
Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population covered
General population

Pathology

Gender
Woman

Geography area
National

Detail of the geography area
France

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)
May 2012

Date of last collection (YYYY or MM/YYYY)
July 2012

Size of the database

Size of the database (number of individuals)
[1000-10 000[individuals

Details of the number of individuals
3 603

Data

Database activity
Data collection completed

Type of data collected
Declarative data

Declarative data (detail)
Phone interview

Details of collected declarative data
The questionnaire was organised around four modules to identify 1) the prevalence of prenatal and postnatal exposure to tobacco; 2) the perception of risks; 3) knowledge of health recommendations; 4) knowledge of aid and information systems

Presence of a biobank	No
Health parameters studied	Health event/morbidity
Procedures	
Data collection method	Interviews were conducted using the Computer Assisted Telephone Interviewing (Cati) system by the ViaVoice survey institute
Participant monitoring	No
Followed pathology	
Links to administrative sources	No
Promotion and access	
Promotion	
Access	
Terms of data access (charter for data provision, format of data, availability delay)	Contact the scientist in charge
Access to aggregated data	Access on specific project only
Access to individual data	Access on specific project only
